

ecosystem

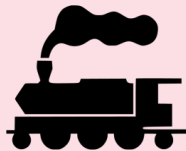

The word "ecosystem" is written in a lowercase, white, sans-serif font. To its right is a white circle containing the letters "ER" in a bold, uppercase, sans-serif font.

ECOSYSTEM FOR
ENTERPRISE RELEASE MANAGEMENT

BENEFITS OF ECOSYSTEM RM

- Accommodate greater business change and streamline project delivery through a Release Train that improves Release Cycles & Release Operations.

- Implement End to end release & project governance to ensure deliverables on schedule and of correct quality.
- Uplift Cross project & system teams' collaboration & alignment through centralised dashboards & reports.
- Establish Real-time visibility of the release pipeline, supporting effective analytics and decision making.
- Reduce manual information gathering and operations by implementing a framework that enforces release management best practice.

ECOSYSTEM FOR ENTERPRISE RELEASE MANAGEMENT

EcoSystem ER is an Enterprise Release Management platform that enables you to manage enterprise releases with transparency and control.

PROBLEM STATEMENT

Managing your enterprise releases is becoming untenable due to existing methods and tools. The high volume of IT change drives the system teams to continually deliver new features and capabilities as rapidly as possible, yet this is constrained due to high volumes of inaccurate and non-integrated data generated from endless meeting and archaic methods like spreadsheets.

Significant release challenges companies face:

- **IT environments & system relationships are inherently complex.**
- **Systems are rarely an island i.e. changing one affects many.**
- **Key information lies on decentralised & non-integrated tools.**
- **Release coordination relies on endless meetings & workshops.**
- **Releases suffer from system unreadiness and/or cross-project contention issues.**

SOLUTION OVERVIEW

EcoSystem ERM is a purpose built On-Premise or SaaS solution for large enterprises wishing to better manage their Enterprise Release Management needs.

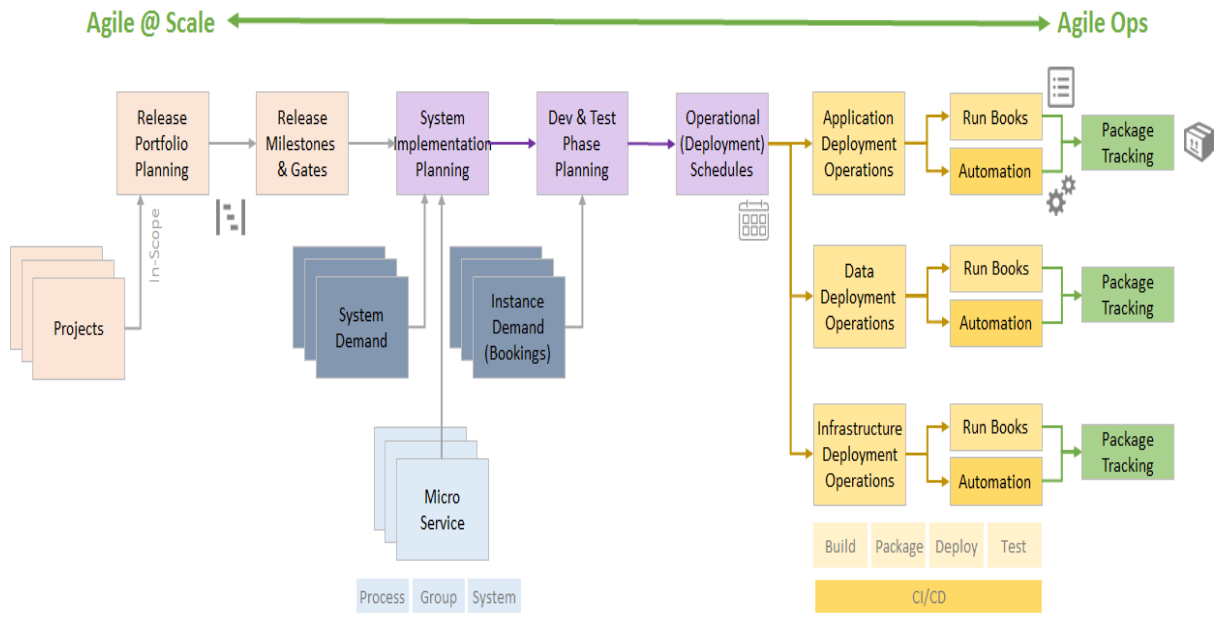

Our platform provides capabilities across the Enterprise Release Management spectrum i.e. from Agile at Scale (i.e. Portfolio Release Management) down to Agile Operations (i.e. day-to-day DevOps activities).

Out of the Box, EcoSystem ER provides a central portal that supports the complete release spectrum including: Portfolio Release Management Scoping, System Requirement Capture, Alignment through Release Master Schedules (Milestones & Gates), Test Phase Demand Identification, Deployment Runsheets, Deployment Orchestration, Production Implementation Planning and Package Version Tracking.

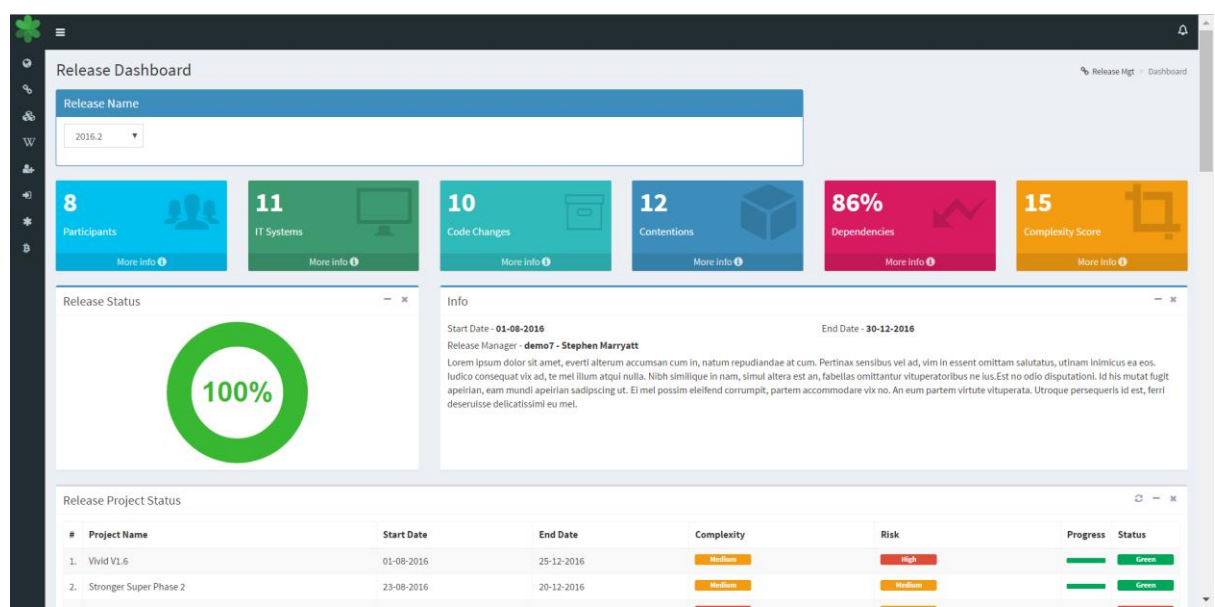

HOW ECOSYSTEM ER WORKS

From agile @ scale to Agile Ops.
